Purpose:
1. To learn how to use a social bookmarking application such as Delicious
2. To learn how to send someone a bookmark (sharing)
3. To learn how to see other's bookmarks in a "network" (sharing)

Procedure
1. Set up an account on Delicious (unless you already have one)
   – your user name will be part of your Web address (ie: http://delicious.com/csit70)
2. Bookmark 2 or 3 (more if you wish) sites that pertain to some aspect of Web 2.0
3. **Send one bookmark to me – for:csit70**
4. Please put your name in the "notes" section of the bookmark so I know who you are
5. I will create a network of users on **http://www.delicious.com/csit70** so that you may all be able to see and share bookmarks, if you wish to use this feature
6. See the class handout and videos to learn more about using Delicious

Note:

We will be creating a few accounts using Web 2.0 applications in this class. You may want to pick one username and password to use for all accounts. That will make it a bit easier to remember. In most cases, you will also be asked for an email address. Using the same email address will also make it easier.
